

## Lesson Plan

**Name of the Faculty:** Ms, Indu  
**Discipline:** Computer Engg.  
**Semester:** 4<sup>th</sup>  
**Subject:** Object Oriented Programming  
**Lesson Plan Duration:** 16 Weeks  
**Work Load (Lecture/Practical) per week (In Hours): Lectures-03, Practicals - 06)**

Theory				
Week	Lecture Day	Topic (Including assignment / Test)	Practical Day	Experiment Name
1st	1 <sup>st</sup>	Introduction and features of C++	1st	Write a function using variables as arguments to swap the values of a pair of integers
	2 <sup>nd</sup>	Procedure oriented prog. Vs object oriented prog.		
	3 <sup>rd</sup>	Oops concepts – classes, reusability, encapsulation		
2nd	4 <sup>th</sup>	Polymorphism , dynamic binding, message passing	2nd	Consider a shopping list of items for which we place an order with a dealer every month. The list includes such as the code number and price of each item we should like to perform operations such as adding an item to the list, <u>deleting an item from the list</u>
	5 <sup>th</sup>	Data hiding, applications of oops		
	6 <sup>th</sup>	Language constructs of c and C++		
3rd	7 <sup>th</sup>	Variables, data type	3rd	Write a prog. To read name, roll number, internal-external marks using classes and display the same on the
	8 <sup>th</sup>	Type declaration		
	9 <sup>th</sup>	User defined data types		
4th	10 <sup>th</sup>	Increment and decrement operator	4th	Write a program of swapping of numbers by accessing private numbers using friend function.
	11 <sup>th</sup>	Relational and logical operator		
	12 <sup>th</sup>	If than else clause, Conditional expressions		
		Input and output statements, loops	5th	Define a class to represent a bank account using constructor including the following data members:- i) for single customer ii) for

5th	13 <sup>th</sup>		<p>n customers</p> <p>a) Name of the depositors</p> <p>b) account number</p> <p>c) type of account</p> <p>d) balance amount in the account</p> <p>member functions:-</p> <p>-to assign initial values</p> <p>- to deposit an amount</p> <p>-to withdraw an amount after checking the balance</p> <p>-to display the name and balance.</p>
	14 <sup>th</sup>	Switch case, arrays	
	15 <sup>th</sup>	Union, functions	
6th	16 <sup>th</sup>	Pointers, pre-processors directives	<p>6th</p> <p>Create 2 classes OM and DB which store the value of distance. DM stores distances in meters and Db in feet and inches. Write a program that can read values for the class objects and add 1 object OM with another object of DB. Use a friend function to carryout the</p>
	17 <sup>th</sup>	Header files, Scope resolution operator	
	18 <sup>th</sup>	Mapping console i/o operations	
7th	19 <sup>th</sup>	C++ stream, formatted and unformatted console	<p>7th</p> <p>A books shop maintains the inventory of books that are being sold at the shop the list includes details such as author, title, publisher and stock position. Whenever a customer wants the book, the sales person inputs the title and author and the system search the list and display whether it is available, the total cost of the required copies is displayed.</p>
	20 <sup>th</sup>	Creation and accessing class members	
	21 <sup>st</sup>	Private vs public class	
8th	22 <sup>nd</sup>	Constructor and destructor with and without arguments	<p>8th</p> <p>Define a class string that could work as a user defined string type include constructors that will enable us to create an un-initialized</p>
	23 <sup>rd</sup>	Object creation and accessing	

	24 <sup>th</sup>	Dynamic memory allocation with new and delete operator		string.
9th	25 <sup>th</sup>	Intro to member functions and method definition	9th	Create a class float that contains 2 float data members. Over load all the 4 arithmetic operators so that do operate on the objects of float.
	26 <sup>th</sup>	Inline function implementation		
	27 <sup>th</sup>	Constant member functions		
10th	28 <sup>th</sup>	Static function, this pointer	10th	Programming Exercise on hybrid inheritance.
	29 <sup>th</sup>	Friend function and its characteristics		
	30 <sup>th</sup>	Introduction to operator overloading, need of operator overloading		
11th	31 <sup>st</sup>	Prefix and postfix notation, binary operator overloading	11th	Define 2 classes POLAR and RECTANGLE to represent points in the POLAR and RECTANGLE systems. Use conversion routines to convert from one system to the other.
	32 <sup>nd</sup>	Type conversion, rules of operator overloading		
	33 <sup>rd</sup>	Comparison between function overloading and overriding		
12th	34 <sup>th</sup>	Introduction to inheritance, types of	12th	Create a base class called shape, use this class to store two double type values that could be used to compute the area of fig. Derive the specific class called TRIANGLE and RECTANGLE from the data shape. Add to base class a
	35 <sup>th</sup>	Single, hierarchical, multiple and hybrid		
	36 <sup>th</sup>	Protected data, public data and private data		
	37 <sup>th</sup>	Inheriting constructors and destructors,	13th	Exercise on file handling.

13th	38 <sup>th</sup>	Constructors and destructors of derived classes and virtual functions		
	39 <sup>th</sup>	Size of a driven class, order of invocation		
14th	40 <sup>th</sup>	Introduction to Polymorphism and virtual functions, importance of V.F.		
	41 <sup>st</sup>	Function call binding, virtual function		
	42 <sup>nd</sup>	Implementing late binding, need for virtual function		
15th	43 <sup>rd</sup>	Abstract base classes and pure virtual function		
	44 <sup>th</sup>	Virtual destructor		
	45 <sup>th</sup>	Introduction to file and streams, components of a file		
16th	46 <sup>th</sup>	Different operation of the file, communication in files		Continue.....
	47 <sup>th</sup>	Creation of file streams, stream classes, header files and updating of file		
	48 <sup>th</sup>	File pointers, function manipulation and detecting end of file
